

LINGUISTICS (B.A.)

The **B.A. in Linguistics** provides a scientific exploration into the study of human language. Throughout the major, students are exposed to courses that outline the theoretical foundations in this field as well as practical application of problem-solving in linguistics. The goal of the linguistics major is to gain a better understanding of what human language is, how we learn it, and how we use it. The major surveys a number of core subfields in linguistics, including sounds (phonetics), sound systems (phonology), sentence structure (syntax), and meaning formation (semantics/pragmatics). In a series of required and elective courses, students will develop strong analytical skills relevant for career paths in language research, technology, education, business, as well as clinical applications such as speech language pathology.

Why major in Linguistics?

Linguistics offers a blend of scientific inquiry and interdisciplinary exploration, appealing to those with a passion for language, cognition, and culture. For those with a curiosity about language and its role in shaping the human experience, linguistics offers a rewarding journey of discovery and insight. Students with a major in linguistics find careers in fields such as research, technology, education, and speech pathology.
