

PUBLIC HEALTH - HEALTH SYSTEMS ADMINISTRATION AND POLICY CONCENTRATION (B.S.)

When people think about careers in health, many think about medical careers (such as doctor or nurse) that involve treating individuals who have illnesses or injuries. Public health practitioners address the health of whole populations and focus on injury and disease prevention, as well as the promotion of optimal health, rather than on treatment. The B.S. in Public Health with concentration in Health Systems Administration and Policy prepares students for administrative roles within a health system. A health system consists of all the organizations, institutions, resources and people whose primary purpose is to improve health. A health system can be large, encompassing the whole health system of a nation (which means all the providers, insurers, nonprofit health education and advocacy organizations, and resources in that nation) or it can be small, consisting of, for example, a group medical practice or a senior living facility. Students will examine the complex problem of providing access to quality healthcare at a reasonable cost and develop an overall understanding of reimbursement mechanisms such as Medicare, Medicaid, and private health insurance, how policy can impact healthcare delivery, and how data is used to inform healthcare decision-making. They will also understand how to transform health systems from an orientation toward treating illness to that of promoting prevention. Graduates will be prepared for jobs as case managers, project managers, program assistants, patient navigators, patient representatives, hospital unit coordinators and representatives, practice administrators, practice assistants, research coordinators, administrative coordinators, data analysts, health data specialists, hospital insurance counselors, performance coordinators, quality assurance specialists, policy analysts, research analysts, and program support specialists, among many others.
